Sunset Proposal Run Sheet

One page. Fill it in, fold it, keep it in the pocket that does not have the ring.

DATE

THE SPOT

BACKUP SPOT (IF CLOUD WINS)

SUNSET TIME
from Asterfold or NOAA

SUN SETS TOWARD (BEARING)
e.g. 249° WSW

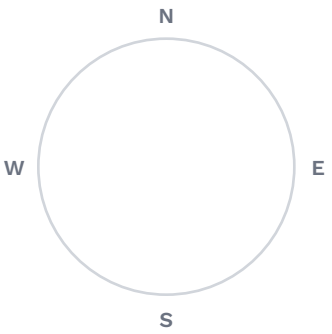
GOLDEN HOUR STARTS
sunset minus ~60

BLUE HOUR ENDS
sunset plus ~25

Run order

- [ ] **Two weeks out** — Sunset time and direction checked; spot chosen with the Sun inside the view
- [ ] **Day before** — Walked the spot at the same hour; three standing spots marked below
- [ ] **2 pm** — Cloud checked 60 and 180 km toward the Sun; backup decision made
- [ ] **Sunset −90** — Arrived; photographer in position; ring reachable
- [ ] **Sunset −60** — Golden hour: the walk, the view, warm-up photos
- [ ] **Sunset −30** — THE ASK
- [ ] **Sunset to +25** — Blue hour: quiet photos, the calls, the walk back

Where everyone stands



Draw the Sun on the rim at its bearing, then mark C (couple) and P (photographer).

COUPLE STANDS
Sun low, behind or beside you

PHOTOGRAPHER STANDS
Sun NOT straight behind the lens

WHO KNOWS THE PLAN

PHOTOGRAPHER PHONE

LENS / PHONE CAMERA
35–85 mm keeps the view and the faces

SIGNAL FOR THE ASK
a phrase, a stop, a turn

Pockets

- [ ] Ring, in the pocket you wrote on the top of this sheet
- [ ] Phone charged, brightness up, Do Not Disturb on
- [ ] Tissues. Really.
- [ ] Water and a layer; it drops fast after the Sun goes
- [ ] This sheet, folded once

Honest Little Apps · Golden and blue hour lengths vary with latitude and season; minus-60 and plus-25 are mid-latitude rules of thumb. Hills and buildings end the light early. Sunset times and directions: Asterfold (calculated on the phone) or NOAA Solar Calculator, gml.noaa.gov/grad/solcalc. Cloud toward the Sun: MET Norway via Asterfold, or your local forecast.
